

Breakout Sessions

How do we create a community-friendly, livable multimodal street?

- Are there transportation issues that have not been identified in previous plans?
- What are the community's priorities to accommodate pedestrian, traffic, transit, and bicycles?
- What does the community vision of a successful Melnea Cass Boulevard project look like?

Project Goals

- **Enhance pedestrian safety**
 - Shorten crosswalks and improve their visibility
 - Improve pedestrian signal timing.
- **Efficient traffic flow and parking**
 - Provide parking for local business, while ensuring that friction from parking cars does not impede traffic flow.
- **Transit and bicycle accommodation**
 - Improve existing bicycle infrastructure
 - Create new dedicated bus lanes.
- **Encourage activity/create attractive front yards for new developments**
 - Create attractive streetscape – distinctive lighting, new green spaces, and street trees to activate the spaces along the corridor.

Breakout Sessions – 30 min.

- Break into small groups (number on handout)
- Discussion in small groups
 - Each group should nominate a speaker to present a summary of its discussion
 - Moderator will board comments/questions
